

Where the Conversion Leaks Are

example.com · CRO Recommendations · August 2026

The single most valuable conversion mechanism on this site, the initial engagement and understanding of the product's value, is bleeding value because the homepage fails to clearly articulate its offering, instead focusing on the domain's technical purpose, as evidenced by the copy 'This domain is for use in documentation examples without needing permission.'

Prioritised findings

#	Finding	Severity	Effort	PXL
1	Missing security headers 6 of 6 standard security headers are absent, which weakens protection against XSS, clickjacking and downgrade...	Medium	Medium	6/10
2	Unclear Value Proposition The homepage copy focuses on the domain's technical purpose rather than clearly articulating the...	High	Low	5/10
3	Vague Call-to-Action The generic 'Learn more' call-to-action lacks specific context about the next step or outcome, creating...	Medium	Low	5/10
4	Weak page metadata Search and social previews are degraded: page title (absent), meta description, Open Graph tags are missing...	Medium	Medium	5/10
5	Missing trust signals above the fold The homepage shows no sign of returns policy, guarantee, reviews, security badge, so a first-time visitor has...	High	Medium	5/10
6	No responsive viewport Without a viewport meta tag mobile browsers render the desktop layout scaled down, making every tap target...	Urgent	Medium	4/10
7	No responsive viewport declared Without a viewport meta tag mobile browsers render the desktop layout scaled down, making every tap target...	Urgent	Medium	4/10
8	Missing trust signals The homepage shows no sign of returns policy, guarantee, reviews, security badge, so a first-time visitor has...	High	Medium	4/10

How to read this

Findings marked **verified** were measured directly and are reproducible. Everything else is a hypothesis derived from inspecting the live pages, which is why the PXL evidence questions score zero for those items. Sized opportunities describe the prize if a change works, not expected revenue: roughly 10–30% of A/B tests produce a significant win, and winners tend to overstate their true effect.
